

Different Types of Shaft Bonding Devices and Their Effectiveness

~ *Felipe Tranquilini (Toshiba)*

~ *Bob Krusemark (Sulzer EMS)*

~ *Mark Zawadzki (International Paper)*

The purpose of this paper is to determine the electrical effectiveness of different shaft bonding devices in low voltage applications. The scope of this study is solely on the electrical-bonding property of these devices. This study will provide a comparison, and recommendation between the currently available shaft bonding devices and common-mode current reduction devices.
